Age Range: 5 - 12 years

Grade Level: Kindergarten - 7

Customer Reviews

"This revised edition provides a much-needed resource for the classroom. Practical strategies for assessing and intervening with children who have experienced maltreatment are based on a sound theoretical framework. The authors' depth of clinical experience is communicated with clear, credible examples. This book is particularly valuable for master's-level students, and also is an important resource for practitioners already in the field."--Caroline L. Burry, PhD, University of Maryland, Baltimore

"This second edition provides an exceptionally insightful integration of the conceptual foundations and practical strategies for clinical work with abused children and their families. The authors translate the concepts and research findings of developmental psychopathology into rich case formulations and comprehensive guidelines for clinical practice. Grounded in attachment theory, the book provides an up-to-date, detailed roadmap for addressing the multiple challenges and systems involved in psychotherapy with maltreated children. This book

will be of high interest to both beginning and experienced therapists across a wide range of disciplines. There is no book that better combines the knowledge base underlying maltreatment with the nuts and bolts of clinical practice."--Eric J. Mash, PhD, Department of Psychology, University of Calgary

Â "This is a highly intelligent book, densely packed with everything a therapist needs to know to understand and care for maltreated children. It's got it all: the research, the theory, and the most up-to-date treatment recommendations. If you were going to buy only one book on therapy for child abuse, this would be the one. If you have a whole study full of books, this one belongs on your center shelf, because it's the one you'll be consulting the most. For all its substantial intellectual wisdom, this remains an extremely human book. Case histories and quotes from maltreated children and their families are generously spread throughout the chapters. I will absolutely use this book in graduate classes on trauma and child abuse."--Lisa Fontes, PhD, University Without Walls at the University of Massachusetts, Amherst

"There is a thorough overview of attachment principles and the research literature to date....Pearce and Pezzot-Pearce present detailed, comprehensive parental and family assessment outlines as well as detailed child assessment formats that include a play assessment, psychological testing protocols, a child mental status exam, and a child attachment interview. Formulation of treatment plans, analysis of the treatment process, and termination principles are discussed in depth." (Families in Society 2006-09-13)

"This is an important, thorough and comprehensive book, a valuable addition to the literature on the treatment of abused and neglected children. Due to the rigor and quality of its bibliography and citations, this is also a valuable text for use in any graduate child psychopathology course where issues of abuse and neglect are part of the curriculum. Both graduate departments of psychology, and those psychiatric residency programs that promote psychotherapeutic as well as pharmacological treatment of children, will find this book very useful." (Child and Family Behavior Therapy 2006-09-13)

"This detailed volume is an important contribution for clinicians who find themselves trying to cope with the strong feelings and complex demands evoked by children who have been mistreated. As these youngsters continue to fill clinics, treatment centers, and psychiatric hospitals, this book will become an invaluable resource for those called on to treat them."(on previous edition) (Bulletin of the Menninger Clinic 2006-09-13)

John W. Pearce, PhD, is a staff psychologist in the Child Abuse Service at Alberta Children's Hospital, Calgary, Alberta, Canada. He also serves as the Coordinator of Consultation Services for the local Calgary child welfare authority, and is an Adjunct Associate Professor in the Clinical Psychology Program at the University of Calgary. With his wife, Terry D. Pezzot-Pearce, he

coauthored Parenting Assessments in Child Welfare Cases: A Practical Guide. Â Terry Dianne Pezzot-Pearce, PhD, is a therapist and evaluator who sees children and parents from the child welfare system, among other clinical cases. She is a Practice Advisor for the Psychologists Association of Alberta and serves as a consultant to various programs and professionals regarding parenting assessments and other clinical and professional issues. Dr. Pezzot-Pearce utilizes an interdisciplinary collaborative law approach in some cases and is actively involved in the Round Table in Family Law in Alberta.

This book was required for a class but I think I will keep it as the information presented is good with a lot of supporting references included. I just do not care for the long chapter format.... so this is hard to read at times. The tables have been the most informative and easiest to read which give a great summary of information. This book is better than most so called "text books". Linda BSW, MSW student

I'm reading this book for a Masters level class on children in trauma. This book is more on the "technical side" of psychotherapy. It's a lot of information, not an easy read and takes a bit to get into it but once you do there's a lot to gain! I read ten pages a day using a high lighter to emphasize portions which has been huge for me. Overall the book provides a lot of great information which the authors deliver professionally. They also give application for the reader and examples. Good book I definitely recommend.

Excellent seller! Just as described! Fast shipping! Buy with confidence! Thank you!

Excellent resource!
