# Hydroponic Garden: The Meaning Of Hydroponic Garden

## Synopsis

Hydroponic Garden - The Meaning of Hydroponic Garden

PREVIEW: To most people, gardens have to have soil in order for the plants to grow. But, for those who know about hydroponics, a whole new world opens up before them that allows them to grow their entire garden without soil. This process uses water to get the nutrients to the roots of the plants, thus cutting out the soil and the weeding that ultimately comes with it. While a hydroponic garden may not be the easiest method, once you get the basics down, it is the most fun way to grow your vegetables.

Hydroponics comes from two Greek words, "Hydro," which means water and "Ponics," which translates to labor. Thus, Hydroponics is making water do the labor that the soil normally does. You will still have to get the nutrients to the plants, and you can do this with natural water soluble ingredients or by chemical additives in the water. Once you have the desired nutrients, you have to decide what the best anchor would be for the plants you want to grow. Containers for hydroponics come in all shapes and sizes and materials.
