Customer Reviews

This is not a book, this is a brochure. It gives a VERY short overview of ideas without substance. For example, on page 11 out of a total of 25 pages total, it says "if you are a beginner I suggest you start out with a simple ebb and flow system and see if that works for you.". This is more like a college brief report on hydroponics, then an instructional book. I wasted my money don't waste yours.

Call me a fool, but I feel as though I got taken on this one. I completely forgot that any jackass with a computer can "write" a "book" and publish it on . This is one of those. As far as the writing is concerned, it appears that some halfwit took their 8th grade Natural Sciences term paper and turned it into self-published trash. The grammar is abysmal and the sections (if you can call them that) lack any semblance of structure. Most importantly, it is virtually devoid of anything informative and useful for the beginner or otherwise to begin their foray into the world of hydroponics. Wikipedia would have been more informative (and, indeed, is). Calling it a "book" is stretching it. It is more akin to a doctor's office pamphlet (without illustrations), but not nearly as informative. Save the money and do not buy this crap. As for the 5 star reviews, all I can say is hooray for family and friends! Way to help the author reach her goal of separating the world from their hard earned money, \$6.99 at a time.

I would have liked to see more detail for setting up a system. This pamphlet basically describes the

different hydroponic systems. You couldn't build much of a unit from the information given. This is light duty - go for something with a bit more depth.

The book is ok at best. The information it contains is fairly limited (and I'm a total noob to hydroponics). I learned more from the web. For the price it's an ok read.

This book is literally 10 pages! save your money! This is a total ripoff! The picture is the book verses the width of a quarter!

This pamphlet appears to be a summary of a "free" article at homehydrosystems.com. It's only 11 pages long and if I saw it at a book store, I might pay \$1.00 for it. This is the first time I've been very disappointed by a purchase at .

This book is literally 13 pages and not every page is full of text. I thought I was getting a book not a pamphlet. For \$6.99 or whatever this is... totally not worth it. This should be a \$1.50 at most. I'm serious there is so little info in this book it will surprise you.

Barely scratches the surface. Doesn't go into any great detail about any one project or type of system. Was expecting a more thorough and step by step process outlined.
