The Source Field Investigations: The Hidden Science And Lost Civilizations Behind The 2012 Prophecies

Synopsis

A stunning synthesis of hidden science and lost prophecies, *The Source Field Investigations* exposes many great secrets: DNA transformation, consciousness science, wormholes, stargate travel, sacred geometry, ancient conspiracies, multidimensional time, the Maya calendar, and a stunning new model of galactic energy fields triggering mental, biological, and spiritual evolution. More than two million people have seen David Wilcock's incredible tour of the 2012 prophecies in his Internet documentary, *The 2012 Enigma*. Now, he expands his vision with a cutting-edge investigation into alternative sciences with deep insights into what is coming in our future. Unlike the apocalyptic viewpoints depicted in big-budget disaster films, Wilcock believes that 2012 will be a water-mark for widespread acceptance of a greater reality - and in his book, he lays out many of the blueprints for such a Golden Age.

Book Information

Audible Audio Edition

Listening Length: 19 hours and 26 minutes

Program Type: Audiobook

Version: Unabridged

Publisher: Brilliance Audio

Audible.com Release Date: August 18, 2011

Whispersync for Voice: Ready

Language: English

ASIN: B005HT3TCA

Best Sellers Rank: #16 in Books > Religion & Spirituality > New Age & Spirituality > Divination > Prophecy #51 in Books > Religion & Spirituality > Occult & Paranormal > UFOs #53 in Books > Religion & Spirituality > New Age & Spirituality > Astrology

Customer Reviews

I learned the meaning of life and how it all works thru reading this wonderful book. He backs up every word of it with scientific experiments that prove his theory. David has a show on Gaia TV website (.99 cents first month~ about ten bucks a month thereafter) in which he expands on what he says in this book with extras like graphs, pictures and humor. Ya gotta love this man. Ppl don't know it yet, but David Wilcock has done so much for the humsn race. And much of it at the risk of losing his own life from threats from those that want to keep us dumb animals. I love him for this. He's a great teacher because this subject excites him too, and this makes it easy to find yourself

becoming excited right along with him. The things he digs up are truly amazing and the best adjective you can think of~ BECAUSE IT ALL MAKES SENSE FINALLY!! When's the last time THAT actually happened? None of the crap we were taught in school or church makes absolute sense. But this does. Do your thirsting mind and spirit a favor. Get this book. Then, get his other two. The newest just came out or is about to by the end of August at the latest. Knowledge IS Power. It's time we all were informed. Start here. No more lies. Let us wake up and then gently wake us others. It's our Human Birthright that was stolen from us. Truth.

In this long rambling march through well-trod paths of alternate history and science, David Wilcock presents a grand theory that the universe is filled with an energy field that is the "source" of everything that exists. This field, which is not part of the electromagnetic spectrum, is instead a field of pure energy that connects everything living and non-living, and creates what the author calls "coherence," a tendency of entities to come into harmony with one another. It operates on its own rules outside mainstream physics and connects two co-existing realities, which the author terms "space-time" and "time-space." The concept of a universal energy field is not a new idea, but harkens back to the "ether" (or "aether") from ancient times, believed to be an energy that fills the universe, to Wilhelm Reich's "orgone" energy, and to more recent theories from authors like Lynne McTaggart, whose book, *The Field*, postulates a universal field of energy. There is also a very close relationship to the concept of "zero point" energy, as explored in Nick Cook's book, *Hunt for Zero Point*. "Zero Point" is an energy state in which gravity is nullified (usually involving a very cold temperature called absolute zero). This parallels Wilcock's assertion of what happens in a point between "space-time" and "time-space" when objects become lighter and ultimately vanish into a different reality. While David Wilcock ties the far-reaching ideas in this book into the Mayan calendar cycle, the many esoteric ideas and alternate science concepts he explores have little to do with 2012. He covers such interesting topics as the spiritual purpose of the human pineal gland, mind and intention controlling matter and influencing events, new discoveries of "pyramid power" from Russian scientists, instant evolution of species, discovery of many long (and ludicrously long) cycles of time affecting evolution and mass extinctions, the geometry of the universe, crop circles, UFOs, levitation, time travel and much more. When you try to cover this much territory, it would be surprising if you got it all right. I doubt that Wilcock got it all right, but he certainly took bold strokes in these pages. I had never heard about the Russian experiments with pyramids that he discusses at length. Somehow, the pyramid shape affects the Source Field in a way that brings beneficial results, including better health, plants that grow bigger, and even a decrease in violent acts by human

beings. Objects kept in a pyramid for even a short time seem to have magical powers to affect growth and well-being. Many authors have written about the Earth data built into the Great Pyramid of Giza, but these effects of the pyramid shape on living matter are a startling revelation, at least to me. Wilcock also discusses new theories about evolution, based on the effects of the Source Field at different times in the cycles of the universe. Examples are large-scale species extinctions and their sudden reappearance, or rapid changes in DNA leading to the sudden appearance of new species. Mass extinctions appear to be happening in the present time, with animal and plant species disappearing at a rapid rate, yet Wilcock states that the new cycle represented by December 2012 will bring a "Golden Age." He seems to imply this Golden Age is imminent, but that hardly seems to be the case. On the contrary, we are looking at a world where polar bears, pandas and tigers could disappear, and cities could be drowned by rising sea levels due to polar ice melting. Our nation is hopelessly divided on important issues and the world is full of violence and war. Not exactly a picture of coherence. Wilcock presents data from NASA that appear to show climate change happening on all the planets in our solar system, not just on Earth. According to his interpretation, the planets are becoming brighter and more energetic. The sun too is in an active phase. We are just beginning the Age of Aquarius and are at a transition point where our solar system lines up with the center of our galaxy, the Milky Way. The Mayans marked December 2012 as the end of a world age, but what does that mean for us? Other authors, such as John Major Jenkins in his book, *Maya Cosmogenesis 2012: The True Meaning of the Maya Calendar End-Date*, have said the beginning of a new age is gradual, with winter solstice 2012 just being an arbitrary and convenient central point. Jenkins did not think the date meant doomsday, but a lifting up of human consciousness to a higher level. But, given the long time frame (over 5000 years) for the "long count" cycle, this could happen over hundreds of generations. How does this alignment with the center of our galaxy affect the energy from the Source Field? This energy, according to the author as well as other researchers who have postulated such an energy field, is contained in vortices (like little tornadoes) in the field. When these are more energetic it means more coherence which is supposed to cause greater cooperation and harmony among living organisms, including us. Possibly it affects human consciousness through opening of the pineal gland (found inside the human brain, and long considered by seekers as the connection point with the spiritual body). This may awaken psychic and spiritual faculties we once had as our planet returns to a previous position, when mankind supposedly enjoyed a Golden Age. This book is full of pretty sweeping conclusions. The concept of two co-existing realities, with one being the "spirit world" and the other our own waking reality, is interesting. Wilcock says these two intersect most strongly at geometrically determined points in the

energy field where you reach "zero point" where gravity weakens, then ceases. This means objects lose mass and begin to levitate. And with that, we have a working hypothesis as to how the ancients moved those massive stone blocks found at sites around the globe, like the Giza Plateau in Egypt, Baalbeck in Lebanon and Sacsayhuaman in Peru. Were those monuments built during a prior "energetic" period? Are these sites located at energetic nodes based on the geometry of the universe? Did the ancients learn the secret of making these huge blocks of stone lightweight so they could be floated into position? This book would be better if Wilcock had left out the Mayan stuff instead of featuring it on the cover. Most of the material here has nothing to do with the Mayans and references to the Mayan calendar seem to have been added on to exploit the public interest in "end of the world" predictions. David Wilcock seems to have fallen for some of doomsday hype too. He loses credibility because of unsupported predictions he made about 2012 that did not happen. He writes in the book that world governments might disclose what they know about UFOs (they haven't) and on YouTube he suggested we would all lose electrical power on December 21, 2012 (we didn't). Since I am writing this on the first day of 2013, it is clear that nothing unusual happened in late December of 2012. But, as with Richard Noone's book, *5/5/2000: Ice- The Ultimate Disaster*, Revised Edition, about the supposed global disaster scheduled for a rare planetary alignment on May 5 of 2000 that was a no-show, I would not assign Wilcock's book to the trash can. I still have Noone's book on my shelf, where it will remain because of the many useful and fascinating facts, illustrations and speculations in its pages. He was wrong about doomsday, as were the many prophets of gloom surrounding the alleged Mayan "prophecies" for December 21, 2012, but there is still value in Noone's book. My own take is that, despite the shortcomings of the man and the failed predictions, David Wilcock has assembled a wealth of sources and ideas that are worth reading. As I made my way through the pages, I kept running into references to other books I have read and other authors and researchers with whom I am familiar. Clearly, Wilcock has covered the major bases of alternative ideas and he pulls together a lot of threads here, creating a big picture of a universe that functions through a field of energy and two intersecting realities. He covers more ground in this book than the average purveyor of doomsday warnings, making this book a keeper for me. There's plenty of ideas here to explore further.

I received everything I expected for this book and then a lot more. So much so that I read it twice and use the historical, scientific and anthropological information in my thinking and writing. The amazing, but suppressed, Russian scientific discoveries were all surprises to me and I couldn't help wonder how different human life would be now if their discoveries and creations were known by

all. The information David shares about the Egyptian Pyramids and those all around the world was exciting and inspiring. Their natural healing powers and abilities to assist humans and nature in so many ways is astounding. It's difficult for me to recommend this book highly enough. Get it. Spend time with it. Your thinking about yourself, and all life, on this planet will be expanded, enhanced, inspired and encouraged. Those are all very good reasons to buy this book.

I've been reading these truths all the way back to the Sheila Ostrander/Lynn Schroeder book, "Psychic Discoveries Behind the Iron Curtain". David Wilcock takes the subject and not only presents it so that a layman like me can get in touch with the Laws of Physics and then prove them outdated. His research has taken most of his life and I, for one, am grateful he's moved to educate the rest of us. His work brings God and Science together and for the first time in my long life I actually believe there is a "God", but without the long white beard and lightning bolt. This is a must read for anyone with "why am I here" questions.
